Fisheye

Picture Description¹⁾

A fisheye lens captures an urban scene, reflecting buildings and sky within a circular frame.

Analysis¹⁾

This photograph presents a striking visual paradox, capturing an urban landscape within the confines of a circular mirror or reflective surface. The buildings, sky, and streetscape are warped into a fisheye perspective, creating a disorienting yet captivating effect. The strong contrast between the dark, unlit areas surrounding the reflection and the brighter, detailed world within the mirror draws the viewer's eye to the focal point. The composition explores themes of perception, reality versus reflection, and the way urban environments can be fragmented and reassembled through alternative perspectives. The stark contrast and distorted reflection create a sense of unease and challenge the viewer's sense of spatial awareness.
