Mirrored Construction III

Picture Description¹⁾

A black and white photograph of buildings reflected in a puddle during rainfall.

Analysis¹⁾

This black and white photograph presents an urban scene captured in a unique perspective, seemingly reflected in a rain puddle. A tall building with numerous windows rises sharply on the right side of the frame, its textured surface creating a stark contrast against the sky. On the left, the reflection of a building under construction, complete with scaffolding, merges with the water's surface, creating an abstract composition of lines and textures. The overall effect is both disorienting and captivating, offering a fresh look at familiar urban elements.
