Street Reflexion I

Picture Description¹⁾

An abstract shot features a window reflection with a figure walking by, casting shadows and reflections.

Analysis¹⁾

This photograph captures a fleeting moment of urban life through the lens of architectural reflection. A figure is partially visible, their presence diffused and distorted within the glass surface of a building. The interplay of light and shadow creates a stark contrast, highlighting the textures of both the surrounding environment and the reflective surface. The composition emphasizes the ambiguity between what is real and what is merely an illusion, prompting the viewer to question their perception of space and reality. The use of strong tonal contrasts and a slightly desaturated palette further enhance the dreamlike quality of the photograph.
